Worst 3 point shooters 2k20

In today's NBA, you can't win a championship without having any quality shooters. Pace and space is the name of the game for several franchises around the league as front offices seem to form their own version of the Golden State Warriors. The thing is, not everyone can hit shots from the depths, but that doesn't stop them from trying. We know who NBA 3-point leaders are, but now we're going to look at the worst 3-point shooters of all time (minimum 1,000 attempts). 10. Jamaal Tinsley, 29.9% Jamaal Tinsley was no. He spent most of his time in Indiana, averaging 8.5 points per game to go along with six assists. He was a solid goalscorer, but he was not a threat from deep at all. Tinsley's highest 3-point percentage was 37.2%, which he did in back-to-back seasons that started in 2003. Reggie Williams, 29.8% A former top-five pick in the NBA Draft, Williams had a respectable nine-year career in the league. He averaged more than 12 points per game, and although the deep ball was not so popular during his tenure, he had no problem lifting it up. He shot a career-best 40.9% in the 1990-91 season playing for three different teams, but all in all, he remains one of the worst 3-point shooters the league has ever seen. 8. Derrick Coleman, the 29.5% Syracuse icon had a very good NBA career and is a borderline basketball Hall of Fame candidate. He averaged more than 16 points and nine rebounds per game, but he was never a threat from long range. Coleman shot a career-low 21.2% in the 1998-99 season. 7. Dwyane Wade, 29.2% Dwyane Wade is not good from long range. 1. Streeter Lecka/Getty Images When he retires at the end of the 2018-19 season, the Dwyane Wade will officially refine what is surely a Hall of Fame career. Always in the conversation for the best shooting guard in the league during his prime, Wade's greatest weakness on the field was shooting behind the arc. He never shot more than 33% from three during his career, but that didn't stop him from averaging 22 points per game for his career. 6. Isaiah Thomas, 29.0% One of the toughest two-way guards of his generation, Isaiah Thomas was also a fierce competitor on the track. He didn't shy away from shooting from long range, even though he's one of the worst 3-point shooters in NBA history. The Hall of Fame guard shot a career-high 19.4% in the 1986-87 season, but he averaged over 20 points per game that year. 5. Ron Harper, 28.9% Known for his tough defensive play on Chicago Bulls teams in the 90s, the five-time NBA champion Harper tried to play for the offense whenever he could. The problem was that he wasn't very good at scoring from deep. He added more than 13 points per game for his career, but shot a career-low 15% on 3-pointers in his second year in the league. 4. Josh Smith, 28.5% One of the flashy dunkers the NBA has seen over the past two decades, Smith also wanted to round out his game by shooting threes. a noble goal, but the problem is that he is still one of the poorest 3-point shooters in the history of the game. Smith took and missed a ton of them. Arguably the wildest statistic of his career came in the 2009-10 season, where he attempted only seven threes all season and missed them all. 3. DeMar DeRozan, 28.4% DeRozan is one of the highest-paid players in the NBA, and his game fits well in San Antonio. He attacks the basket with the best players in the league, and he has an excellent midrange game. What he doesn't have is to vary from behind the arc. He's in the top three of the worst three-pointers of all time with good reason. Teams dare him shoot, and most of the time that dare turns into a long rebound and simple transfer buckets. With less than 10 games left in the 2018-19 season, DeRozan shot just over 16% from deep. Unless he improves his shot in the offseason, DeRozan could see himself at the top of our roster before too long. Corey Brewer, 28.2% Corey Brewer has been a career traveler, playing for eight teams during his 11-year NBA career. Part of the reason he's jumped from team to team is his poor 3-point shooting. He has been a double-digit scorer lately, but shot a career-worst 19.4% during his rookie year with the Timberwolves. 1. Charles Barkley, 26.6% One of the greatest power forwards to go on hardwood, Charles Barkley was a cruel scorer during his career. And The Round Mound of Rebound was one of the best working the glass. Averaging over 22 points per game during his career, he shot over 30% from three just twice in his 15-year career. Sir Charles is one of the best players in NBA history, but he also has the dubious honor of being among his worst 3-point shooters as well. Will any more active players make the list? Now that we've seen the 10 worst 3-point shooters of all time, are there any other current players you see making the list? Oklahoma City stud Russell Westbrook makes a little more than 30% of his long-range shots, which is more than the players on this list can say. Only time will tell if his deep-end struggles make Westbrook one of the most futile 3-point shooters in league history. Fadeaway World NBA has become a shooting league. Credit Stephen Curry for this latest change, since many teams now want the best shooters on the floor at all times. After all, the best shooters in the league are often the most exciting players to watch. They can get hot and turn games around in the team's favor, and certainly get the crowd behind them. But there are also some very bad shooters. Those types of guys who love to jack up three-point shots and rarely make them. Since there are big shooters in the league, it is also very poor. Most of the guys on this list take many threes and simply can't drain them at an effective rate. As a result, here are the 10 worst shooters in the NBA. 10th Spencer Dinwiddie - 28.3% Dinwiddie had a breakout year years and improved all aspects of his game. Having been a simple bench warmer since entering the league, he has blossomed into a highly effective player for the Nets. His playmaking, size and scoring is what makes him a good player and one of the best on his team. But his 3-point shooting has been rotten. He is only hitting 28.3% of his threes, a very low number for someone who handles and scores the ball as much as he does. He needs to improve his shooting if the Nets want to make some noise this year. 9. Terrence Ross - 28.3% Ross has been a steady scorer throughout his career, and a pretty decent shooter from three since he entered the league. He is one of the few wings that can be effective at both ends of the floor and also get out and run at the break at a high level. But his three-point shooting so far this year hasn't helped the Orlando Magic. He seems to struggle to hit shots consistently, despite having a good look, and he has started the year slowly. To try 6 threes a game, his shooting simply isn't good enough. 8. Jarrett Culver - 28.2% Credit: Getty Images Rookie Jarrett Culver is a fine young player with many potentials. His size and overall skill set seem impressive, and he's one of the smartest players to come out of the draft this year. He shoots only 28% however, and can not find any rhythm in his shots. Not to mention the fact that he is under 70% from the line, which is also unacceptable. Culver had plenty of room to grow, and it's not fair to hit his three-point shooting yet, but it needs to improve. 7. Austin - 28.2% Credit: USA Today The Rockets backup guard provides plenty of energy and defensive firmness when he's on the floor. The Rockets need him to be lively on defense, but also nail open shots when Harden or Westbrook find him easy to look. So far this year, this has not happened. Rivers struggle from the depths, averaging less than 30% from the three-point line. For a team that loves threes more than any other team out there, having to hit a higher percentage of their team wants more shooters on the floor to succeed. 6. Lauri Markkanen - 28.2% (via Chicago Tribune) Markkanen develops into a dominant player since he can play both ends of the floor and is mobile enough to affect the game in many areas. His defense shot blocking, and ability to score is very impressive for a young player. But the young player simply cannot find his reach, as he is barely over 28% from deep despite attempts at 5 threes a match. The Bulls need as much scoring help as they can get, and his poor shooting doesn't help their cause at all. 5. Patrick Beverley - 27.0% Beverley is not known for his offense or his shooting since he is such a lively defensive player who brings a ton of energy to the floor. His hustle and rebounding is also what makes him a valuable player for the Clippers. But when he's been open, it hasn't fallen for him. Beverley is currently shooting a very 27% from three wood To get open looks from guys like Kawhi Leonard and Lou Williams. Beverly must shoots better from the other side as the team's starting point guard spot, especially since the Clippers want to be the favorites in the West for the title. 4. Julius Randle - 26.9% Credit: NBA Big man Julius Randle is actually a little undersized, so it is expected that he will have to develop a consistent jump shot to be effective for his team. But he has not been able to achieve this and shoots below 27% from three. This is very bad and many people wonder why he even tries as many threes as he has. Randle is most effective using his quick first step to finish on the basket and also use his strength down low in the end. A midrange game would also help, but his three-point shooting has been very bad for the struggling Knicks. 3. Nikola Jokic - 24.2% Into the three worst shooters in the league, star freeman Nikola Jokic has not had it from the depths. He shoots a very bad 24%, an unacceptable number for a man who jacks up 4. 3-pointers a game. Although it is not surprising that a great man does not shoot a high percentage from the depths, since many do not, but Jokic is simply better than his numbers suggest. Jokic may want to focus his efforts low and also on his excellent midrange play until he develops a rhythm. It hasn't affected the Nuggets so far, as they're stuck like others in the West, although it may come playoff time. 2. Jordan Poole - 23.5% Warriors have been a complete disaster this year and have literally fallen off the map after years of dominance. Because of injuries and poor performances, the Warriors are forced to play their young boys and give them chances to grow at work. Youngster Jordan Poole plays 26 minutes per game and takes five threes per game despite shooting below 24%. While he has been thrown into the fire, the young player must make more threes or just stop taking many of them if he wants to help this sinking team out the bottom of the conference where they sit dead last. Poole's shooting has more to do with the warrior's terrible season too far than his actual skills. 1. Russell Westbrook - 22.5% Credit: Getty Images Again, Westbrook is the worst shooter in the NBA. As big as he is on the pitch, this is an area that simply hasn't improved for the star guard. The Rockets, as a whole, have not found their reach at all this season, and this has hurt their seeding in the West so far. Westbrook appears to be on a two-year slump, where he can't find the net at all from three. Rumors are circulating about a hand injury, although Russ can still attack and finish at high speed. Westbrook loves the three, and we all know that, but his terrible shooting (22%) is just terrible considering that he takes almost 6 threes a game. He becomes a serious liability from the other, and this could be the rocket's fall this year.
